

Assignment 09 | Building Enclosure

PennDesign
Environmental Systems I
Fall 2017
Andrew Matia

39.87° N | 75.23° W

Insulation Material

Material

Kraft Faced Fiberglass Insulation Roll

Closed Cell Rigid Foam Board

Fire Resistant Stone Wool Insulation

R-Value

R-20

R-10

R-23

Price

\$24.99 /each
Dimensions: 5.5" x 15" x 384"
Total Covered Area = 40 sq.ft.
Price Per Sq.Ft = **\$0.62 /sq.ft.**

\$29.99 /each
Dimensions: 2" x 48" x 96"
Total Covered Area = 32 sq.ft.
Price Per Sq.Ft = **\$0.94 /sq.ft.**

\$43.27 /8-roll
Dimensions: 5.5" x 15.25" x 47"
Total Covered Area = 39.8 sq.ft.
Price Per Sq.Ft = **\$1.09 /sq.ft.**

Scatter Plot

Analysis

There is no immediate correlation visible with the R-value and price per square foot of the material. Generally, the price trend seems to reflect the material type rather than the R-value. Typical insulators, like the fiberglass batt insulation, is overall cheaper option when compared to more unique insulation types, such as stone wool insulation or denim insulation.

Window Assembly

Assembly	U-Factor Solar Heat Gain Coefficient	Price
Jeld-Wen V-2500 Single Hung Window	.29 .23	\$214.09 /each
		
Jeld-Wen W-2500 Double Hung Window	.34 .30	\$306.23 /each
		
Jeld-Wen V-4500 Casement Window	.27 .18	\$254.10
		

Scatter Plot

Analysis

There is again no strong correlation visible between the U-Factor and the price per unit of typical window assemblies. There is a slight trend in the upward direction, U-Factor increases with price, but overall the price trend seems to be affected more by the type of window assembly over the U-factor. I did control the sample set, by controlling the widow size, material, and glass type. All windows are 30"x48", made of vinyl, have double-paned, low-E glazing, and contain Argon glass in the air cavity between the panes.
