

EXERCISE: ILLUMINATIONNAME Bingyu Wang

Using one of the light meters on reserve in the Fine Arts Library make the following measurements.

1. Take the following measurements in a room on or near campus (not in Meyerson) to which you have easy access (classroom, coffeshop, your apartment, etc.).

Measure the horizontal illuminance two times during the day and once after dark (you can calculate the amount of daylight if the same lights are on for both measurements by subtracting the nighttime measurement from the daytime one).

Measure the horizontal illuminance outdoors at the same time as the daytime measurement.

Take a photograph of the light conditions and add your evaluation of the light level: too low, low, enough, high, too high

Room Name: Fine Arts Library Reading Room

Time 1. 1 pm Indoor Illuminance (FC) 25
Outdoor Illuminance (FC) 876
Evaluation Interior is enough and exterior is too high

Time 2. 3 pm Indoor illuminance (FC) 18
Outdoor Illuminance (FC) 424
Evaluation Interior is enough and exterior is high

Nighttime. 6 pm Indoor illuminance (FC) 6.8
Outdoor Illuminance (FC) 0.7
Evaluation Interior is low and exterior is too low
