

Discuss the process of finding the optimum form in a short report. Include the final value for net solar benefit, and building area in your report.

The building area is 25,568 sq.ft and final value for net solar benefit is 1560. By considering summertime sun and wintertime sun to predict the outdoor's hotness and coldness temperature helped to process the design of Meyerson Hall. Evaluating the result of solar radiation-based design could help the best way to find the design to save energy.
