

EXERCISE: ILLUMINATIONNAME Mohamed Ali

Using one of the light meters on reserve in the Fine Arts Library make the following measurements.

1. Take the following measurements in a room on or near campus (not in Meyerson) to which you have easy access (classroom, coffeshop, your apartment, etc.).

Measure the horizontal Illuminance two times during the day and once after dark (you can calculate the amount of daylight if the same lights are on for both measurements by subtracting the nighttime measurement from the daytime one).

Measure the horizontal illuminance outdoors at the same time as the daytime measurement.

Take a photograph of the light conditions and add your evaluation of the light level: too low, low, enough, high, too high

Room Name: Fischer Library Ground FloorTime 1. 13:30 Indoor Illuminance (FC) 32.2Outdoor Illuminance (FC) 295Evaluation Too High Outside High InsideTime 2. 15:30 Indoor illuminance (FC) 39.1Outdoor Illuminance (FC) 164.4Evaluation Too High Outside High InsideNighttime. 18:00 Indoor illuminance (FC) 29.2Outdoor Illuminance (FC) 0.7Evaluation Too Low Outside High Inside
